DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-26, drawn to a method of using a blood clotter, classified in class 606, subclass 213.
- II. Claims 27-45, drawn to an apparatus capable of clotting a wound, classified in class 606, subclass 214.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case group II can be used in a materially different process. It is not necessary for the device to provide a source of suction when the a wound is being sutured. It is also not necessary to apply a flowable adhesive before or after inserting the hemostatic material.

Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper.

This application contains claims directed to the following patentably distinct species of the claimed invention.

If applicant elects group I the applicant must elect those claims readable on one of the following two species.

1. The method of applying the flowable adhesive before the material is advanced into contact with the blood vessel.

or

2. The method of applying the flowable adhesive after the material is advanced into contact with the blood vessel.

If applicant elects group II the applicant must elect those claims readable on one of the following two species.

1. The hemostatic apparatus where the catheter contains more than one lumen

or

2. The hemostatic apparatus where the catheter contains exactly one lumen

If applicant elects group II the applicant must elect those claims readable on one of the following two species.

1. The hemostatic apparatus where the hemostatic material member comprises two layers joined by cement.

or

2. The hemostatic apparatus where the hemostatic material member comprises two layers that are formed as one piece.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, the independent claims appear generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

A telephone call was made to Glen Nuttall on Nov 1st, 2002 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
